WHAT IT DOES

- **Batch Coordinator**
Raw-material inventory vs. demand — flags shortages early.
- **Production Scheduler**
Real capacity forecast from actual working days.
- **Plant Supervisor**
Executive rollup across every module, real time.
- **Material Prep Scheduler**
Sequences prep and staging by batch priority.
- **Floor Coordinator**
Live batch status and automatic shift hand-offs.
- **Sync & Export Hub**
One source of truth, clean exports for leadership.

Configure, don't code — no developer required to keep it running

WHY IT'S DIFFERENT

Built to get supervisors off the desk and onto the floor — lightweight, browser-based, checked from a phone or tablet, so decisions are made from real numbers, not memory or whoever spoke to them last. Meets standard IT requirements: encrypted, role-based access, full audit trail, flexible hosting. The same core system adapts beyond manufacturing to any operation running on shifts, batches, or jobs against fixed capacity — warehousing, food & beverage, field service, and lab operations.

WAYS TO WORK TOGETHER

Operations Diagnostic

\$2,500 flat

1–2 week floor assessment. Quantifies what manual tracking costs you.

Managed Retainer

From \$1,800/mo

Full build, hosted and maintained on an ongoing basis.

Standalone Build

From \$18,000

One-time build and handoff. You own and operate it.

Diagnostic fee credits toward Standalone Build or first month of Retainer if you move forward within 30 days.
